

IN THE DRAWINGS

Applicant respectfully submits that the cited elements of the pending claims are illustrated in the drawings.

For example, Figure 3 recites at 34 “Obtain loudness values for frames”, and is described in the specification as including sampling frames such that the loudness levels of the sampled frames are representative of the track as a whole.

Figure 3 also recites determining and applying loudness weighting to emphasize the relatively greater effect the louder frames have on loudness perception, aggregating the weighted loudness values to obtain an overall value, and applying gain to the track based on compared perceived loudness value and desired loudness value.
